Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, 23 and 27-29, drawn to a nucleic acid, a host cell containing the nucleic acid, a method for producing a polypeptide by using the host cell, a method for detecting the presence of the nucleic acid and a kit, classified in class 435, subclass 196, 252.3, 6 and class 536, subclass 23.3.
- II. Claims 12-18, 24-26 and 30-32, drawn to an enzyme, a method of detecting the presence of the enzyme, a kit, a method for identifying a compound which binds to the enzyme, a method of modulating the activity of the enzyme and a method for identifying a compound which modulates the activity of the enzyme, classified in class 435, subclass 196 and 19.
- III. Claims 19-22, drawn to an antibody, classified in class 530, subclass 387.9.

The inventions are distinct, each from the other because:

The products of groups I-III are completely different chemical compounds and are patentably distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
